

Moodle Skydrive plugin review

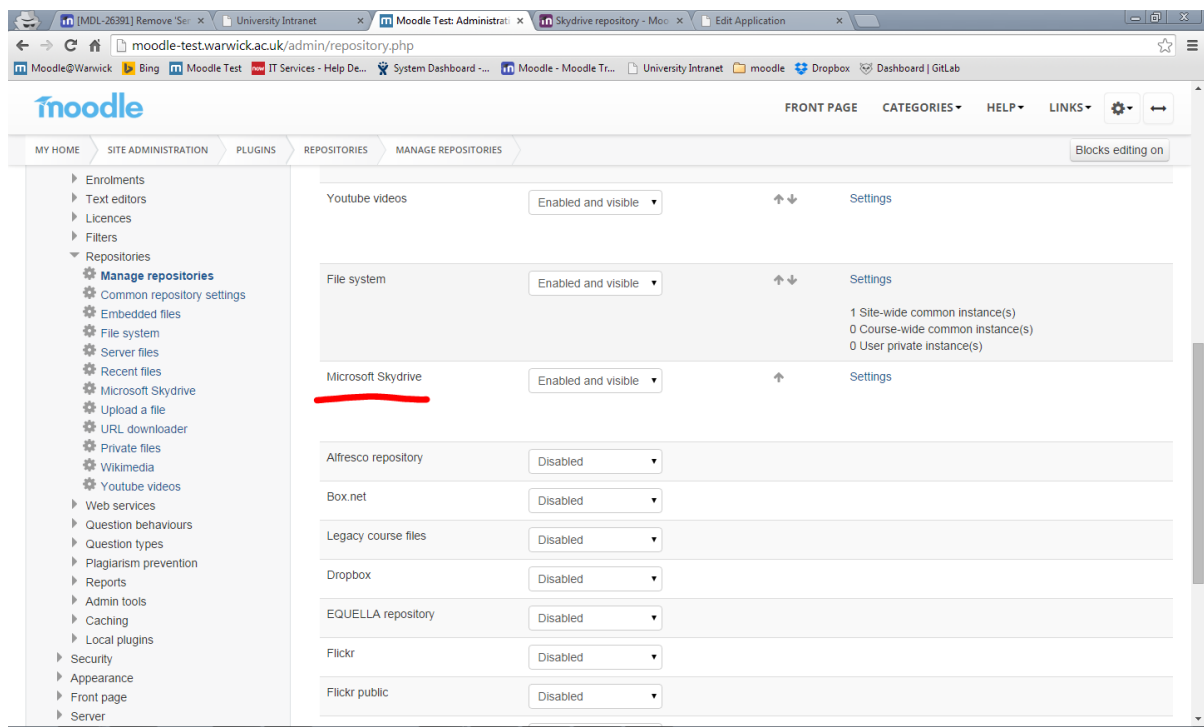

The integration with Moodle doesn't seem to be working

The plugin installed on **moodle-test** was already installed.

From the file *version.php* on **moodle-test**, the version of the plugin on the server seems more recent than the one available online.

The plugin seems to be configured correctly.

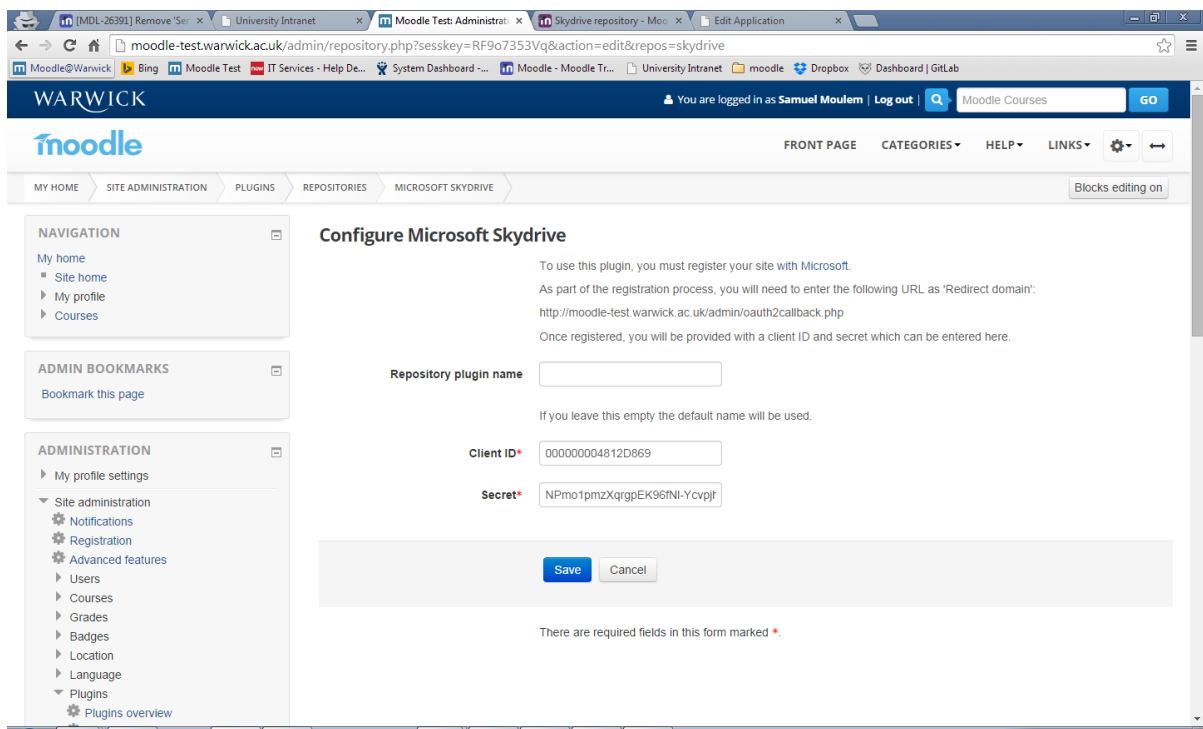

The plugin was enabled

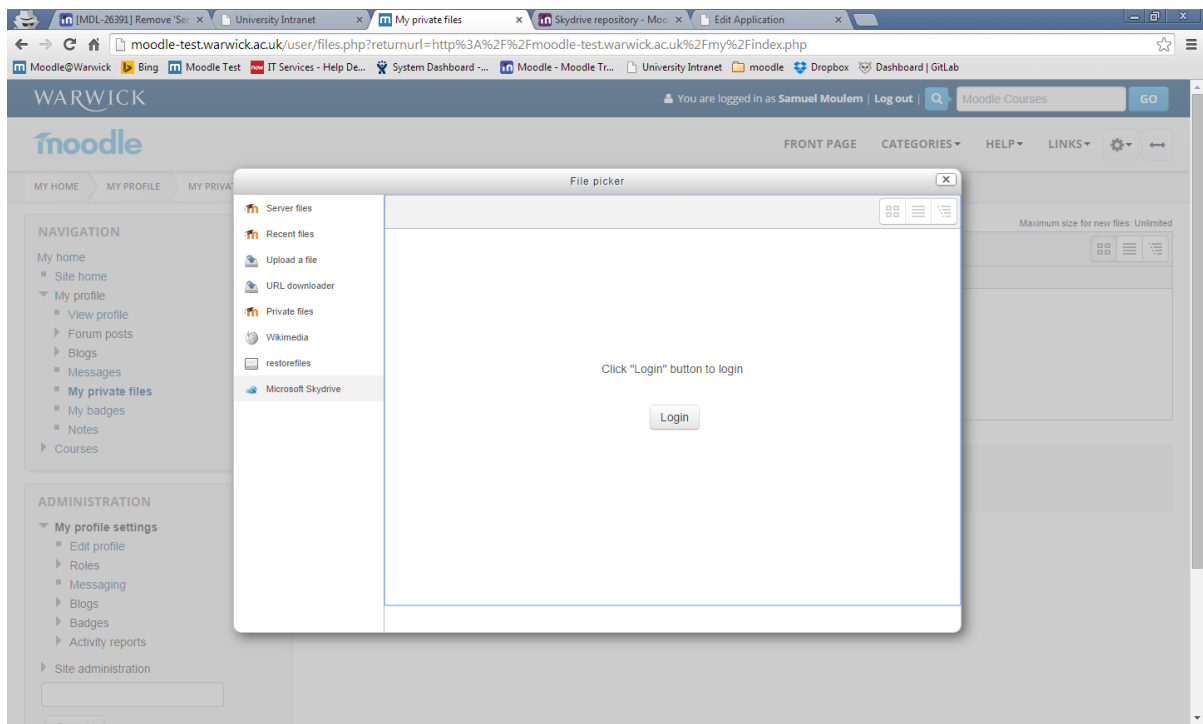

The screenshot shows the Moodle administration interface for 'moodle-test.warwick.ac.uk'. The 'Manage repositories' page is displayed, showing a list of installed plugins and their status. The 'Microsoft Skydrive' plugin is highlighted with a red underline and is set to 'Enabled and visible'. Other plugins like 'Youtube videos', 'File system', 'Alfresco repository', 'Box.net', 'Legacy course files', 'Dropbox', 'EQUELLA repository', 'Flickr', and 'Flickr public' are listed, with most being 'Disabled'.

Repository Name	Status	Instances	Settings
Youtube videos	Enabled and visible		Settings
File system	Enabled and visible	1 Site-wide common instance(s) 0 Course-wide common instance(s) 0 User private instance(s)	Settings
Microsoft Skydrive	Enabled and visible		Settings
Alfresco repository	Disabled		
Box.net	Disabled		
Legacy course files	Disabled		
Dropbox	Disabled		
EQUELLA repository	Disabled		
Flickr	Disabled		
Flickr public	Disabled		

The required Client ID and secret were set.

However when one tries to use the plugin, Moodle comes back with an error
